FOR IMMEDIATE RELEASE

NEW CLOSET VAULT PUTS SECURITY ANYWHERE YOU WANT IT.

Homeowners need the confidence that their valuable papers, jewelry, currency and firearms are protected against theft. Unfortunately, traditional safes are difficult and costly to move to the ideal location in the home, such as an upstairs room or closet. As a result, not enough safes are purchased and valuables go unsecured – until SnapSafe.

SnapSafe Closet Vaults assemble anywhere in minutes with no tools. Its patented “post & keyhole” assembly system latches together like a ski boot, to give you all the impenetrable security of a conventional welded safe. SnapSafe puts security anywhere you want it, without the hassle of moving a conventional safe. What’s more, with 2300°F ceramic fiber fire shielding and door seals SnapSafe closet vaults help protect firearms, jewelry, currency and valuable papers from fire as well as theft.

The idea was born when third generation safe builder, Edward J. McGunn, and his wife, a gun collector, faced the huge effort and expense of moving a 300 pound safe to the ideal location on the second floor of their home. “Even after all the effort, time and money, it still didn’t end up exactly where we wanted it,” says McGunn. “That’s when I thought of SnapSafe™ – a safe that would come in pieces, each light enough to carry and assemble anywhere.”

SnapSafe Closet Vaults come in the 60” Titan and 30” Little Titan. At under 18 inches in depth they fit anywhere – even an upstairs closet, but with none of the hassle and cost of conventional safes. Both feature American made digital locks with non-volatile memory, plus commercial grade “non breech seal” dead bolt door systems.

Most important, SnapSafe lets owners easily locate their safe in the most logical area of the home. That’s the best way to make sure more safes get used; and more safe usage means more valuables protected and more crime deterred.
